## Desiccant Filling Machine

- Designed to eliminate labor and quality control problems associated with spacer filling operations. This Desiccant Filling Machine can simultaneously fill different dimension & length spacers.
- Filling cycle is completely automatic. Desiccant is contained on a large capacity air tight storage box assuring you of factory fresh desiccant. Air Tight storage box eliminates dust contamination in the work area.
- While machine is in operation an operator can perform keying and frame assembly operations. Gravity and vibration assure tight filling of each spacer regardless of dimension and length.
