

Adjustable Standoff Railing System

Maximum Adjustability for Flexible Installation

The Adjustable Standoff Railing System improves versatility and function to give glass professionals greater control when installing glass railings and windscreens. Its distinct modifiable feature allows up to 1/2" (12 mm) of glass projection adjustment to precisely align glass panes when substrates are uneven.

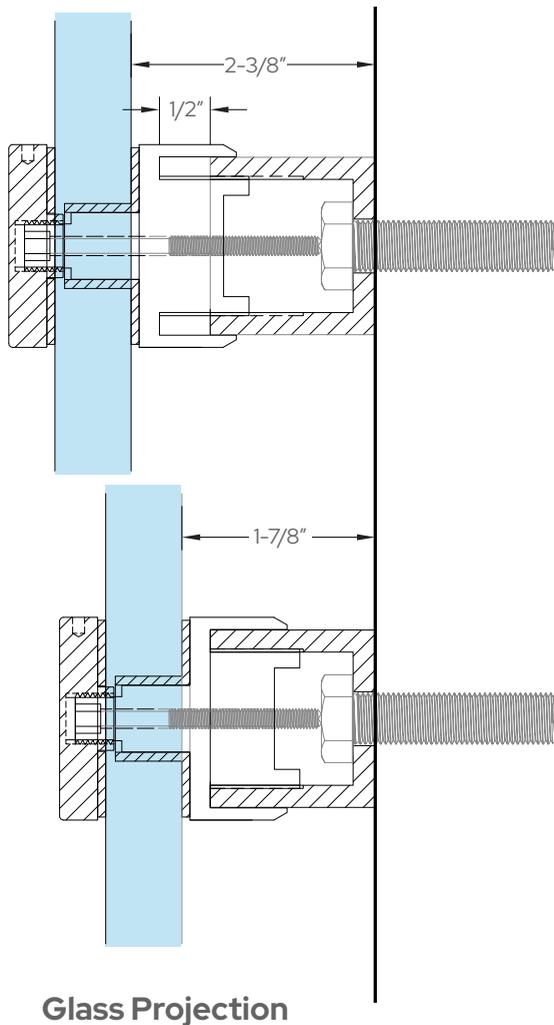

Crafted from durable 316 stainless steel, Adjustable Standoffs are built to withstand the test of time. Because of their low-profile design, they create beautiful all-glass aesthetics to preserve exterior views. Concealed adjustment threads further enhance the standoff's clean and streamlined look.

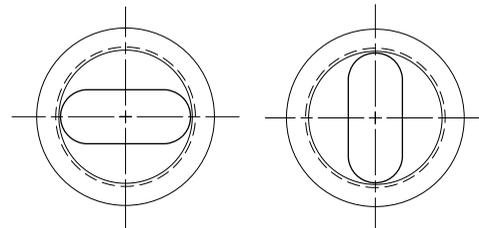

CRL | Features and Benefits

The Adjustable Standoff system offers maximum flexibility. It can be used in both guardrail and windscreen applications, and standoff bases can be adjusted up/down and left/right for easier installation.

- Concealed threads produce a clean and streamlined look
- Low-profile hardware creates all-glass visuals
- For 3/4" (19 mm) to 27/32" (21 mm) monolithic or laminated tempered glass
- Matte black, brushed stainless steel, and polished stainless steel finishes
- Maximum glass heights apply (see Glass Height Limitations chart)
