

CAPF114BS

SPECIFICATIONS:

MATERIAL:

Stainless Steel, Brushed Finish

GLASS FABRICATION REQUIRED:

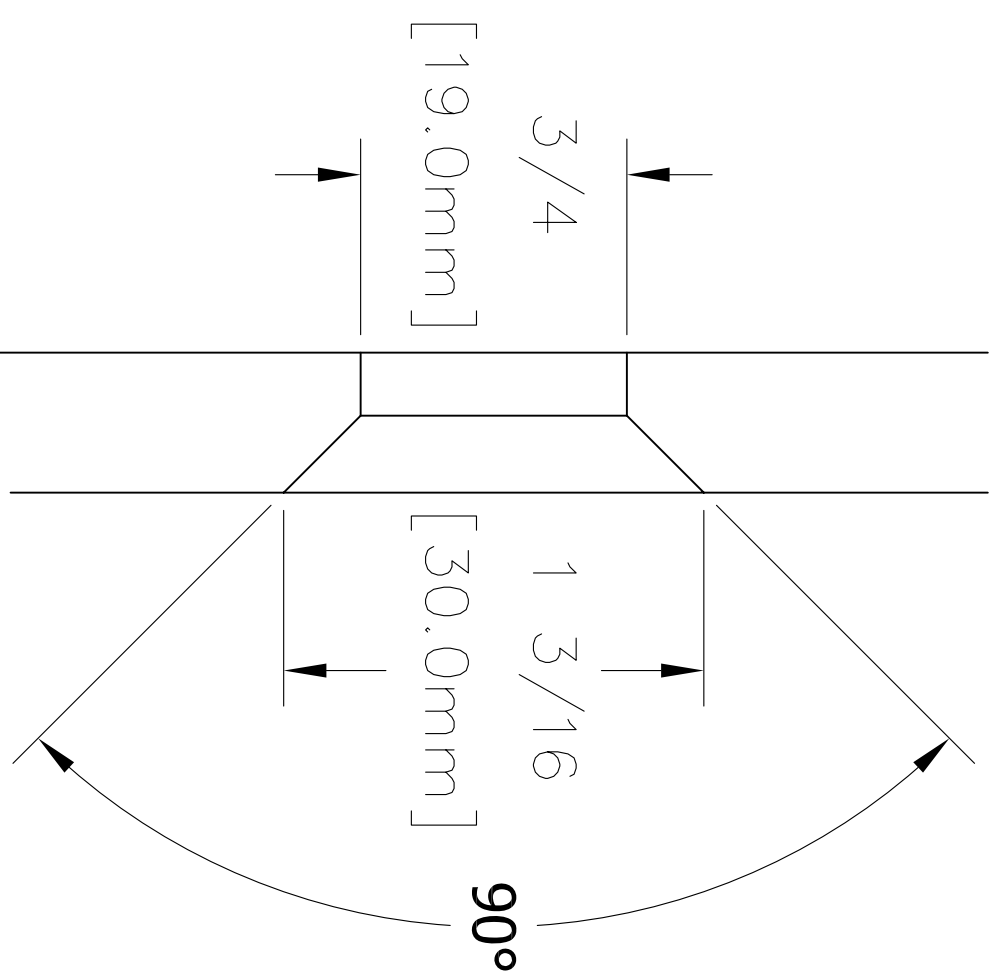

One 3/4" [19mm] Diameter Countersunk Hole

FOR GLASS THICKNESS:

Up To 1/2" [12mm]

**If P/N CAP35S Is Used, Up To 3/4" [19mm]*

*Glass Thickness Is Acceptable**

Drill a 3/4" [19mm] diameter hole through the glass. Using the BDC112, countersink the glass to the approximate width shown. The exact depth of countersink should be determined by test fitting the CAPF114BS on a test piece of glass before production begins. Occasional random sampling of holes should be done to assure consistent fabrication.
