TCR-225

Thermal window wall

# TCR-225 Thermal Window Wall

Meet the new standard in thermal window walls. It combines seamless design with unsurpassed efficiency, weathering tough environments, installing with ease and saving you on glass costs, to keep you on budget. At Oldcastle BuildingEnvelope, we're redefining every detail of thermal performance and aesthetics from the ground up.

## Industry-leading thermal performance

Our proprietary high-performing thermal strut technology allows you to customize performance based on project requirements and budget.

For **top** thermal performance, TCR-225 achieves U-factors as low as 0.30 (COG = 0.24) without the need for triple glazing, an industry first.

For **high** thermal performance, TCR-225 can meet code requirements in many cities throughout North America without the expense of high-performance glass or argon fill, achieving U-factors as low as 0.34 (COG = 0.29).

## Seamless design

TCR-225 is designed with an innovative front screw spline, allowing for tighter, more consistent joints. No more visual gaps between horizontal and vertical mullions. Just a flawless window wall.

TCR-225 is also available with dual finish for a customized exterior and interior look to match your desired aesthetic.

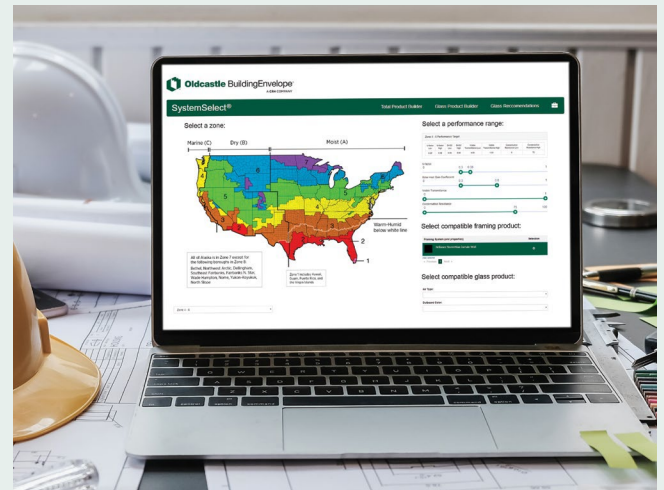

## Seamless installation

TCR-225 is available dry-glazed and as a pre-glazed system, significantly reducing field labor costs and making installation easier, allowing you to stay on schedule and on budget.

## Seamless spec calculation with SystemSelect™

Gather thermal and visual performance details for entire architectural glass and metal systems quickly with our free online tool.
