Test Sample Description: (Continued)

COMPONENTS			
	Type	Quantity	Location
WEATHERSTRIP			
	Dual leaf vinyl gasket	1 Row	All members of the vent.
	Foam filled vinyl gasket	1 Row	All members of the frame.
HARDWARE			
	Lever lock	2	Bottom rail.
	Keeper	2	Sill.
	Multi arm hinge	2	Jambs.
DRAINAGE			
	No visible weeps		

Test Duration:

1. The environmental systems were started at 14:25 hours, 10/26/10.
2. The thermal performance test results were derived from 03:56 hours, 10/27/10 to 07:56 hours, 10/27/10.

Condensation Resistance Factor (CRF):

The following information, condensed from the test data, was used to determine the condensation resistance factor:

T_h	=	Warm side ambient air temperature	69.80 F
T_c	=	Cold side ambient air temperature	-0.26 F
FT_p	=	Average of pre-specified frame temperatures (14)	39.73 F
FT_r	=	Average of roving thermocouples (4)	37.40 F
W	=	$[(FT_p - FT_r) / (FT_p - (T_c + 10))]$ x 0.40	0.031
FT	=	$FT_p(1-W) + W (FT_r)$ = Frame Temperature	39.65 F
GT	=	Glass Temperature	42.44 F
CRF_g	=	Condensation resistance factor – Glass	61
		$CRF_g = (GT - T_c) / (T_h - T_c)$ x 100	
CRF_f	=	Condensation resistance factor – Frame	57
		$CRF_f = (FT - T_c) / (T_h - T_c)$ x 100	

The CRF number was determined to be 57 (on the size as reported). When reviewing this test data, it should be noted that the frame temperature (FT) was colder than the glass temperature (GT) therefore controlling the CRF number. Refer to the 'CRF Report' page and the 'Thermocouple Location Diagram' page of this report.

Thermal Transmittance (U_c):

T_h	=	Average warm side ambient temperature	69.80 F
T_c	=	Average cold side ambient temperature	-0.26 F
P	=	Static pressure difference across test specimen	0.00 psf
		15 mph dynamic perpendicular wind at exterior	
Nominal sample area			9.68 ft ²
Total measured input to calorimeter			488.00 Btu/hr
Calorimeter correction			140.43 Btu/hr
Net specimen heat loss			347.57 Btu/hr
U	=	Thermal Transmittance	0.51 Btu/hr·ft ² ·F

Glazing Deflection (in.):

	Glazing
Edge Gap Width	0.52
Estimated center gap width upon receipt of specimen in laboratory (after stabilization)	0.48
Center gap width at laboratory ambient conditions on day of testing	0.48
Center gap width at test conditions	0.45

The sample was inspected for the formation of frost or condensation, which may influence the surface temperature measurements. The sample showed no evidence of condensation/frost at the conclusion of the test.

A full calibration of the Architectural Testing Inc. 'thermal test chamber' (ICN 004287) in Fresno, California was conducted in April 2010 in accordance with Architectural Testing Inc. calibration procedure. A calibration check was performed September 2010.

Prior to testing the specimen was sealed with silicone on the interior side and checked for air infiltration per Section 9.3.4.
