The Solstice Sliding Door is nothing less than bold and refined. A patented hubless wheel design with concealed ball bearings creates a striking aesthetic that commands attention. Its robust assembly delivers an impressive 550 lb maximum weight capacity to accommodate heavy glass doors over large openings.

Completely concealed fasteners give the Solstice track its unique floating-on-air appearance, which elevates contemporary interiors. The track system also features bi-directional level adjustment to ensure a smooth, frictionless slide regardless of door weight.

Available Finishes

Brushed Stainless

Black stainless

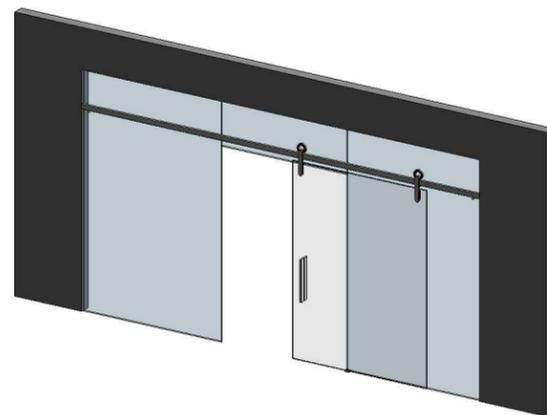

Unmatched Field Adjustability

A significant benefit of this slider door series lies in its exceptional adaptability at the time of installation, ensuring a precise and accurate fit.

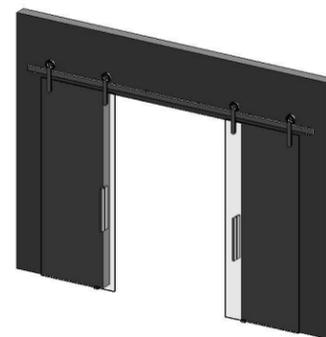

- Adjustable glass pane height
- Adjustable barn door stops
- Slider door track leveling
- Adjustable sliding door track height
